D-Link DUB-AV300

Pinnacle Micro has announced the local availability of D-Link's high-speed digital audio/video (AV) grabber, the DUB AV300.

The DUB-AV300 allows users to attach analogue cameras to carry out video conferencing, video mails, surveillance and periodic or long-time recording from the PC. The AV300 uses built-in hardware MPEG 1/2/4 encoder/decoder IC capable of processing video stream data, providing very high-speed analogue-to-digital conversion from an analogue camera/camcorder/VCR interface to the PC through USB 2.0 connectivity.

The DUB-AV300 allows users to capture

30 frames per second at a resolution of 720 x 480 directly to the PC's hard disk via the USB bus. It captures CD quality stereo audio at 16 bits, 24 kHz-sampling rates with its AV synchronising feature.

In addition, video editing software for family movies is bundled with this device to allow users to edit and save digital video on the hard drive or CD, and users can easily attach the recorded digital video to emails, capture still frames and set up motion-sensing video recording.
