Network storage enclosure

D-Link has introduced the MediaLounge DSM-G600 wireless G network storage enclosure. This enables you to connect your own hard drive to the home or office network and create additional storage space. You can also share documents, files and digital media such as music, video, and photos on your home or office network. The DSM-G600 can be used with an internal 3,5" ATA/ IDE hard drive, giving the flexibility of choosing the network storage capacity required. With two additional high-speed USB ports, expand storage capabilities even further by adding your own external USB drives. The DSM-G600 also functions as an access point. Create an 802.11g wireless network when attaching the DSM-G600 to

your wired router.
